LEARN MORE

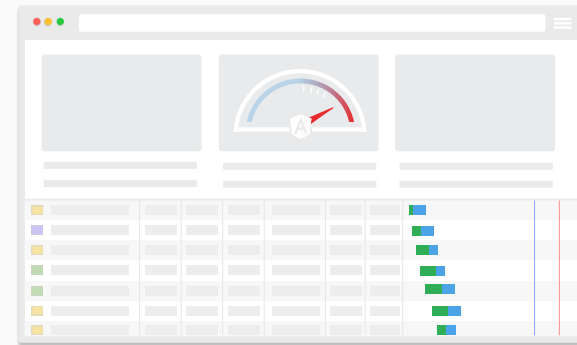

DEVELOP ACROSS ALL PLATFORMS

Learn one way to build applications with Angular and reuse your code and abilities to build apps for any deployment target. For web, mobile web, native mobile and native desktop.

SPEED & PERFORMANCE

Achieve the maximum speed possible on the Web Platform today, and take it further, via Web Workers and server-side rendering.

Angular puts you in control over scalability. Meet huge data requirements by building data models on RxJS, Immutable.js or another push-model.

INCREDIBLE TOOLING

Build features quickly with simple, declarative templates. Extend the template language with your own components

```
1 import { Component } from '@angular/core';
2 @Component({
3   template: `
4     <h1 [style.font]="font">{{title}}</h1>
5     <div>{{person.address.}}</div>
6     <span (c latitude
7   })
8   export class
```

and use a wide array of existing components. Get immediate Angular-specific help and feedback with nearly every IDE and editor. All this comes together so you can focus on building amazing apps rather than trying to make the code work.

LOVED BY MILLIONS

From prototype through global deployment, Angular delivers the productivity and scalable infrastructure that supports Google's largest applications.
